

# RHEINZINK®

Krinner-Kofler-Cottage, Vereiner Alm/Karwendel Mountains, Mittenwald, Germany, Architect: Holzer + Hoß GmbH, Kochel am See, Germany

## RHEINZINK® – the environmentally compatible building product

Many years ago, the German Institut Construction and Environment (ECO) declared RHEINZINK® material to be an environmentally compatible building product, following a complete and comprehensive assessment of its entire lifecycle. Now an additional Environmental Product Declaration according to ISO 14025 has been created within a new programme for ECO Environmental Declarations.

This unique programme provides a standardized starting point from which to evaluate the environmental compatibility of a product within the context of its application. Ecological balance as per the internationally applicable ISO 14040 Standard is the fundamental principle for this evaluation, along with other product-specific specifications. All relevant product data are recorded, tested and verified by an independent committee of experts.

**Natural material for roofing, façade cladding and roof drainage products**

**Low energy consumption during production**

**100% recyclable – 95% recycling rate**

**Environmental Product Declaration according to ISO 14025**

**Production-related Environmental Management System according to ISO 14001**

**High durability**

**Protection against electromagnetic radiation**

**Sustainable life cycle due to high scrap value**

Program holder

RHEINZINK GmbH & Co. KG  
Bahnhofstraße 90  
45711 Datteln  
Germany

Declaration holder

EPD-RHE-11105-E

Declaration number

**RHEINZINK® – Titanium Zinc**  
This declaration is an Environmental Product Declaration according to ISO 14025 and describes the environmental performance of the above mentioned building products.  
All relevant environmental data are disclosed in this validated declaration.

Declared  
building products

This validated declaration authorises the holder to bear the official stamp of the Institute Construction and Environment. It only applies to the above mentioned products for three years from date of issue. The declaration holder is liable for the information and evidence on which the declaration is based.

Validity

The **declaration** contains in detail:

- Product definition and physical data
- Information about raw materials and origin
- Specifications on manufacturing the product
- References for product processing
- Information on product in use, singular effects and end of life
- LCA results
- Evidence and verifications

Content of the declaration

20th December 2005

Date of issue

  
Prof. Dr.-Ing. Horst J. Bossenmayer (Chairman)

Signatures

This declaration, and the rules which it is based on, have been verified by the independent Advisory Board (SVA) according to ISO 14025.

Verification of the  
declaration

  
Prof. Dr.-Ing. Hans-Wolf Reinhardt (Chairman of the SVA)

  
Dr. Eva Schmincke (Verifier appointed by the SVA)

Signatures

**Short version  
Environmental  
Product Declaration**

The material RHEINZINK® – Titanium Zinc is an alloy based on pure zinc with additions of copper, titanium and aluminium. All RHEINZINK® products are made of this alloy. The declaration applies to all three surface qualities: RHEINZINK® -bright rolled and RHEINZINK® -“preweathered <sup>pro</sup> blue-grey” and RHEINZINK® -“preweathered <sup>pro</sup> graphite-grey”.

The titanium zinc sheets are produced in several thicknesses. These vary according to the type of titanium zinc sheet from 0.7 mm (5 kg/m<sup>2</sup>) to 2.0 mm (14.4 kg/m<sup>2</sup>). The moulded density of zinc is 7.2 g/cm<sup>3</sup>.

**Product description**

Titanium zinc sheets are used for roofings and wall claddings as well as for roof drainage systems (roof gutters, pipes and accessories).

For roof drainage, the titanium zinc sheets are processed into roof gutters, down pipes, eave flashings, other accessories or constructive sheets.

A reduction of the exposed surface relating to the material is achieved for the roof drainage by cuttings when tailoring sheets, gutters and pipes and also by overlapping when putting together and joining by soldering as well as by mounting under a roof overhang.

For roofing applications, the exposed surface is reduced by having seams, foldings, overlappings, cuttings etc. depending on the method of installation. A reduction of the exposed surface can be achieved for wall claddings through vertical assembly (roof overhang, orientation and shadowing effects e.g. through adjacent housing or trees).

**Applications**

The **Life Cycle Assessment (LCA)** was carried out according to DIN ISO 14040 et sqq. Specific data from the company RHEINZINK in Datteln, Germany, statistical data from the Wirtschaftsvereinigung Metalle (Trade Association for Metals) as well as the data base “GaBi 4” were used. The LCA was carried out for the manufacturing phase of the products, taking into account all background data such as raw material exploitation and transports (“cradle to gate”).

The use phase of the titanium zinc sheets is divided into several application areas: roofing applications, roof drainage and wall claddings. The treatment for the titanium zinc sheets was modelled for secondary melting for the end-of-life phase. The resulting credit of extracted zinc is counted as replacement for primary zinc.

**Scope of the LCA**

Titanium zinc sheet				
Parameter	Unit per kg	Sum of production and recycling potential	Production	Recycling potential
Primary energy, non-renewable	[MJ]	<b>16.3</b>	45.5	- 29.2
Primary energy, renewable	[MJ]	<b>0.9</b>	3.8	- 2.9
Global Warming Potential (GWP)	[kg CO <sub>2</sub> eqv.]	<b>0.96</b>	2.62	- 1.65
Ozone Depletion Potential (ODP)	[kg R11 eqv.]	<b>0.18 * 10<sup>-6</sup></b>	0.56 * 10 <sup>-6</sup>	- 0.39 * 10 <sup>-6</sup>
Acidification Potential (AP)	[kg SO <sub>2</sub> eqv.]	<b>3.32 * 10<sup>-3</sup></b>	13.5 * 10 <sup>-3</sup>	- 10.2 * 10 <sup>-3</sup>
Eutrophication Potential (EP)	[kg PO <sub>4</sub> eqv.]	<b>0.28 * 10<sup>-3</sup></b>	1.03 * 10 <sup>-3</sup>	- 0.76 * 10 <sup>-3</sup>
Photochemical Ozone Creation Potential (POCP)	[kg ethene eqv.]	<b>0.29 * 10<sup>-3</sup></b>	1.10 * 10 <sup>-3</sup>	- 0.80 * 10 <sup>-3</sup>

**Results of the LCA**

Issued by PE Europe GmbH, Leinfelden-Echterdingen, Germany

The following **evidence** and **verifications** are also described in the Environmental Product Declaration:

- Atmospheric corrosion and surface loss (erosion), measurement of the rates of corrosion and the erosion of zinc ions due to precipitation over a test period of eight years (1991 – 1998)

**Evidence  
and verifications**

RHEINZINK®-bright rolled

RHEINZINK®-“preweathered<sup>PRO</sup> blue-grey”

RHEINZINK®-“preweathered<sup>PRO</sup> graphite-grey”

**RHEINZINK® – the ecological material**

Within the context of sustainable building, the importance of environmental compatibility of building products has increased significantly, influencing decisions of building owners and planners when selecting materials. Apart from its durability, the advantages of this material include: low energy consumption during production, a high recycling rate, and energy savings as a result of the high rate of recycling.

**RHEINZINK® – durable and sustainable**

RHEINZINK® has always ranked very high when it comes to environmental performance. Ecological standards are set from the beginning: energy consumption during raw material extraction and processing is minimal. The latest production equipment keeps emissions to a minimum. RHEINZINK® can be 100% recycled and, with a lifespan of several decades, sets a very high standard. Apart from exemplary

ecological properties, its “self-healing” surface is very impressive: the aesthetically pleasing protective patina, which develops as a result of weathering, evens out any scratches and minor damage quite naturally and guarantees durability with little or no maintenance. This feature applies to all RHEINZINK® surface qualities. RHEINZINK® maintains its value even after its life as a roof, façade cladding or roof drainage product is complete: as the energy consumption for recycling is only about 5% of its primary energy content and the price for scrap metal is up to 60% of the raw material price for pure zinc, a decision in favour of RHEINZINK® is also a decision in favour of future generations. Thanks to the high rate of recycling – over 95% – a further reduction of energy consumption for primary material is attained. Scrap metal from the RHEINZINK®-manufacturing process is fed right back into the smelting process without any additional pre-treatment.

**Solid Values**

Build with RHEINZINK, secure in the knowledge that you are acquiring lasting value. In addition to its statutory liability, RHEINZINK offers a 30 year material guarantee. That provides reliability.

**RHEINZINK® provides protection against electromagnetic radiation**

There is a very controversial discussion in the public domain surrounding electromagnetic radiation; within this context, the International Society for Electro-Smog Research (IGEF e.V.) has analyzed and determined the protective properties of RHEINZINK®.

The result: more than 99 % of electromagnetic radiation is screened off by RHEINZINK®. Biological tests on humans confirm this and indicate a harmonizing effect on heart, circulation and nervous system, especially when grounded, and a relaxing effect on the whole body.
